Prerequisites

      For managing dependencies, Laravel uses composer. Make sure you have a Composer installed on your system before you install Laravel.

https://getcomposer.org/download/

After the Composer is installed, Used **Laravel version 10** and **PHP ^8.1.**

Install laragon or xampp with php ^8.1

Git Repository Link

      https://github.com/syed-husnain/timezone-aware/tree/master

Step 1:

      Goto Code and click it

Step 2:

      Copy clone Https Url

Step 3:

      Goto to your xampp/laragon www directory and clone the project

Step 4:

      After successfully cloning the project chnage **.env.example** file to **.env**

Step 5:

      Add Database name in **DB_DATABASE** e.g timezone_aware.

Step 6:

      Create Database with same name on any server like xampp/laragon.

Step 7:

      Navigate to the terminal and make sure you are currently in your project directory.

Step 8:

      Run Command: "**composer install**"

Step 9:

      After successfully installed composer run command "php artisan key:generate"

Step 10:

      Run Command: "**php artisan migrate:fresh --seed**"

Step 11:
